

## Ambulance Service

If after initial diagnosis, treatment and stabilization you require transfer to any of the numerous other facilities we work with, our hospital provides transport ambulance services. Our transport ambulance is staffed by certified EMT's & nurses. Emergency helicopter transports are also available.

## Pharmacy

The Clifton-Fine in-patient pharmacy is stocked to meet the emergency and day to day needs of the hospital. Recently the Pharmacy has implemented a new technology in the form of the Pyxis Automated Dispensing System. This system allows for more efficient and effective patient care.

## School-Based Clinic

In the partnership with the Edwards-Knox Central School, Clifton-Fine Hospital provides primary health care services to students at its school-based health clinic located in rural Russell NY. The school based health clinic is open from 7:45 to 3:45 on regular school days. Patients will be seen by Katherine Matthis P.A.

# Clifton-Fine Hospital

**“Quality Care Close to Home”**

## Acute Care

The acute care nursing staff provides caring individualized attention to all patients who are hospitalized. Our nursing staff works together with the other hospital employees to provide quality care to all patients. Due to the smaller size of our facility patients are able to receive individualized attention from our nursing staff.

## Clinic

The Clifton-Fine Clinic provides primary health care services to patients of all ages. The clinic provides a variety of services including preventative care, chronic disease treatment, comprehensive physical exams, immunizations and more. To make an appointment call: (315)848-5404.

## Laboratory

The laboratory provides vital information to the medical staff for diagnosing illnesses and treating patients. The lab performs tests ordered by physicians throughout the North Country and can actually complete tests ordered by any physician in the nation.

## Swing Bed Program

Swing bed care bridges the gap between a hospital stay and returning home. When you no longer require full hospitalization but still need additional medically-supervised services, you can remain at, or transfer to Clifton-Fine Hospital for swing bed care.

## Medical Imaging

The medical imaging department offers diagnostic testing that can provide a window into the cause of various ailments. In addition to conventional x-rays, the imaging department can also perform CT scans, ultrasounds, bone density scans, fluoroscopy, EKGs, holter monitoring and mobile mammography services.

## Long-Term Care

The long-term care staff provides medical and non-medical services for people with disabilities or chronic illnesses who cannot care for themselves over an extended period of time. Our goal is to promote the highest level of independence for each resident in a family-like environment.

## Emergency Department

Clifton-Fine's Emergency Department is open 24 hours a day, 7 days a week. We are staffed with specially trained emergency room physicians and nurses, and are well equipped to provide care for those in critical need.

## Physical Therapy

The physical therapy department provides rehabilitation care to people suffering from physical problems secondary to injury, accidents, birth defects, surgery or aging process. Physical therapy is available for outpatients, inpatients, swing bed patients, and long term care patients.
